

Electrical Specifications

Input Voltage 87-240V AC

Input Power 65W Maximum (20W Typical)

Input Frequency 47-63 Hz

Material Specifications

Main unit: Anodised Aluminium

End plates: UL V-0 rated polycarbonate

Water and Dust Protection

IP Rating: IP68 IEC 60529

Built-in EMI Filter

Meets: FCC 20780 Class B

VDE 0871 Level A

Safety

Europe and Worldwide:

IEC51010-190+A1:92 +A2:95 ~EN61010

Tested accorded to CENELEC National Requirements

USA: UL3101-1

Canada: CSA22.2 No:1010.1-92

Over-voltage (Transients) 10 to 20% above nominal

Environmental Specifications

Installation category:

Cat II; Altitude: <2000 Mtrs (6562'); Operating Temperature: -20 to +50° C (-4 to 122°F);

Maximum relative humidity; Max 80% up to 31°C (87° F) decreasing linearly to 50% RH at 40° C (104° F)

Overload Protection Continuous short or open circuit on all outputs.

Insulation Basic insulation with the metal enclosure bonded to earth.

Servicing

No user repairable parts are fitted. Repair must be undertaken by an authorised repair centre.

Panel Indicators

The unit is fitted with LED indicator lights. The Green LED indicates that the power is on, and the Red indicates that a signal is being transmitted.

CSA Certification and CB Test Certificate

In accordance with the International (IEC) and UL/CSA standards listed above.

Manufactured to BSEN9002

To be installed in accordance with the latest IEE wiring instructions.

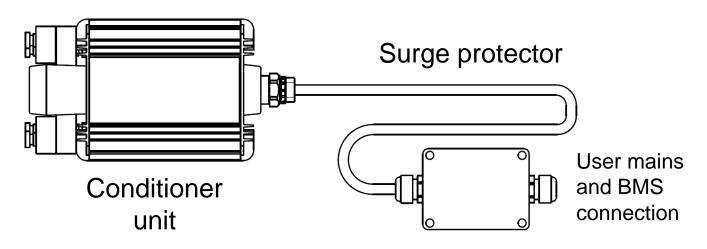

Fuse rating: 1A.

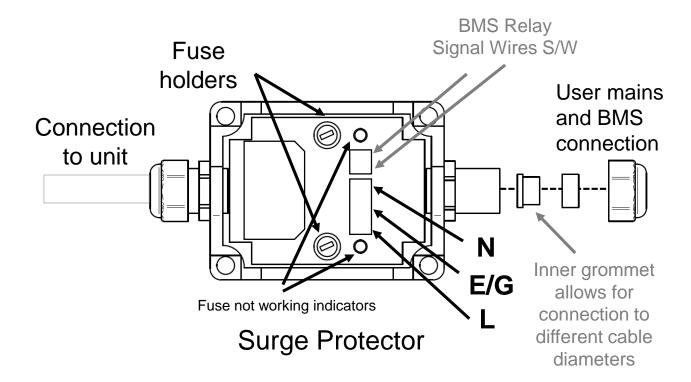

To be installed in accordance with the latest IEE wiring instructions.

Fuse rating: 1A.

Electrical Specifications

Remote Monitoring Facility

A volt free normally open contact closure is provided by the unit connection with a BMS (Business Management System) computer, to monitor that the unit is operating correctly. Connection to the BMS output is made via the surge protector. A suitable 5 core approved cable can be used in order to make connection to the mains input and the BMS output. If a BMS connection via a separate cable is preferred, an additional connection point can be supplied as an optional extra.

Electrical Connection

The user must connect the electrical supply to the surge protector in accordance with the on-site ruling safety legislation at the time of installation by a certified electrician. Failure to do so will invalidate the warrantee. This is the sole responsibility of the user and the site safety officer must be consulted before installation is undertaken.

Mechanical Details

The Hydropath Marine range of water conditioners are specifically designed to treat limescale in Marine applications by clustering mineral ions, to enhance filtration by flocculating particles and to reduce biofouling.

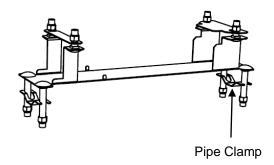

Model	Ferrite Arrangement	Dimensions mm (inches)	l Forritos	
HM45	Arrow indicates shorter 109mm ferrite	45mm pipe (1.75")	1 x 109mm (4.25") 3 x 126mm (5.0")	4.1 (8.8)
HM60		219.4 (8.63") (8.63") 555mm pipe	4 x 126mm (5.0")	4.2 (9.2)
HM100	Arrow indicates longer 126mm ferrite	(2.2") 219.4 (8.63") (8.63") (6.58) 104mm pipe (4.1")	5 x 109mm (4.25") 1 x 126mm (5.0")	4.4 (9.7)
HM130		219.4 (8.63") 27 (5.5) 130mm pipe (5.1")	6 x 126mm (5.0")	4.6 (10.1)
HM150	Arrows indicate longer 126mm ferrites	219.4 (8.63") 07.22 175mm pipe (6.9")	5 x 109mm (4.25") 3 x 126mm (5.0")	5.4 (11.9)
HM190	6.9	219.4 (8.63°) 199mm pipe (7.8°)	8 x 126mm (5.0")	5.8 (12.8)

[•]All units draw less than 1 amp of current at 120V AC

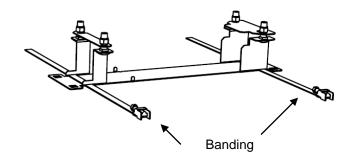

[•]Listed weights include: Transducer unit, power supply, ferrites, cables and mounting hardware.

DO NOT POWER UP UNIT UNTIL ALL FERRITES SUPPLIED ARE CONNECTED.

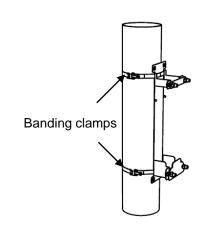

- The unit is supplied with a bracket for ease of mounting to the pipe. The two upper plates should be loosely secured with bolts before installation.
- Smaller units are secured to the pipe using steel clamps and bolts

- For larger units, the brackets are supplied with stainless steel banding.
- Pass the two stainless steel bands through the slots in the bracket.

- · Place the bracket on the pipe.
- If installing on a vertical pipe, place the bracket with the smaller plate upwards to ease fitting of hexagon nuts.
- Tighten steel hex nuts to secure clamps for smaller units
- Secure straps on larger units by tightening clamps with flathead screwdriver or hex socket driver

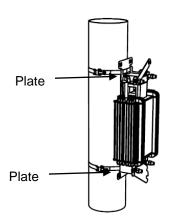

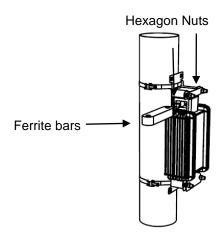

<u>WARNING</u>

DO NOT POWER UP UNIT UNTIL ALL FERRITES SUPPLIED ARE CONNECTED.

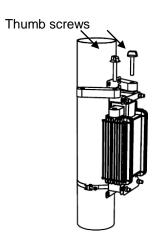

- Place the unit on the bracket and hold in place using the swinging plates.
- · Secure by tightening the four steel nuts.

- Insert the two hexagon nuts into the holes in the end plate, next to the ferrite holding cage.
- The transducer unit is supplied with at least one long ferrite bar. Insert this through the holding cage until the holes line up with the hexagon nuts.

- Take a second ferrite, insert a plastic thumb screw through both ferrite bars and loosely screw into hexagon nut.
- Repeat on opposite side.

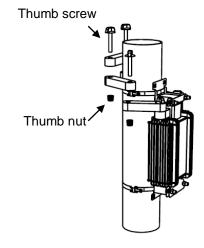

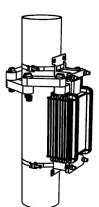

<u>WARNING</u>

DO NOT POWER UP UNIT UNTIL ALL FERRITES SUPPLIED ARE CONNECTED.

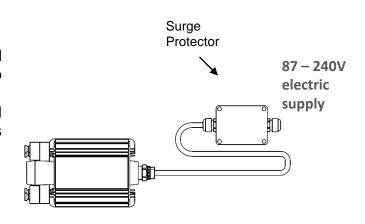

- Assemble all the other ferrites around the pipe according to the mechanical configuration specified for the unit.
- Loosely secure each ferrite with plastic Thumb screws and thumb nuts.

- Once the ferrite ring is complete, tighten all wing nuts until hand tight.
- Do not over tighten as ferrites are fragile.

- In accordance with local marine code and regulations, connect the surge protector to the electrical power supply (87V-240V AC).
- Energize the electrical power supply and ensure that the Red and Green LED lights on the unit are glowing brightly.

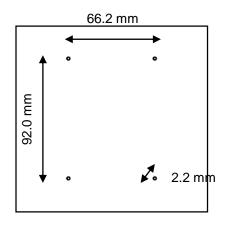

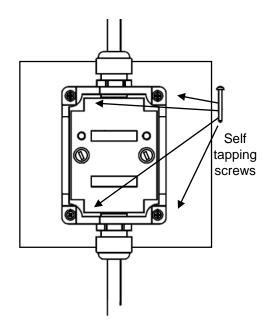

<u>WARNING</u>

MOUNTING THE SURGE PROTECTOR

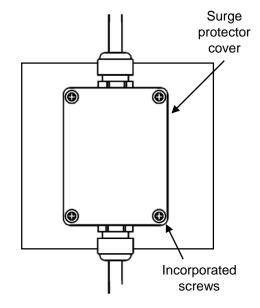

- The surge protector should be mounted an a safe, convenient location.
- To secure the surge protector to a back plate, first drill four 2.2mm pilot holes as shown.

- Remove the surge protector cover by loosening the four screws in the lid.
- Insert the four self-tapping screws into the holes in the surge protector base and into the pilot holes. Tighten until the surge protector is secure.

 Once the surge protector base is fixed to the back plate, replace the lid and secure using the four incorporated screws.

WARNING

Location Criteria

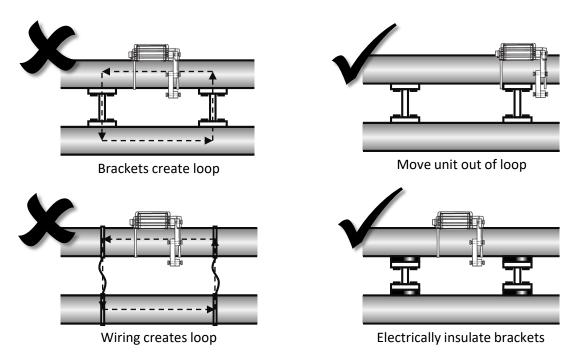

The Hydropath Marine unit can provide a range of benefits, including protection against limescale, treatment of biofouling, and flocculation of particles. The most effective location for the unit depends on the result desired.

- •For protection against Limescale due to heating, the unit should be fitted on the cold feed to where the water is heated.
- •For protection against limescale, the unit should be fitted after any pumps or filters as these can degrade the conditioning effect.
- •To enhance flocculation or kill bacteria, the ideal location is before the pump feeding a filter.

Electrical Loops

An electrical loop is created whenever an electrical connection is made from one side of the ferrite loop to the other, e.g. by metal supports, wiring or pipework. A loop will prevent the unit from operating correctly.

This problem can be solved by moving the unit outside the electrical loop. If this is not possible, the metal support brackets can be electrically insulated. Installing the unit on a section of plastic pipe eliminates the possibility of an electrical loop.

If you are unsure of any details of fitting or installation, please contact your local Hydropath representative for technical support
